

Water and Sewer Design Manual V3.5 Changes

This update to the design manual is to incorporate changes and corrections from V3.4

- Section 6 C: Water Conveyance is now only requesting 1 set for the Preliminary Design Review Submittal.
- Section 6 E.1 and 2: Changed text describing review process and added that consultants should get approval from PWD Project Engineer before changing design from Water Conveyance and Collector's Systems comments.
- Water Conveyance's name has been made consistent throughout the Design Manual.
- Section 2 D.5.m: Normalized text between Water Contract Drawings and Sewer Contract Drawings sections with regards to double lined sewers.
 - Existing sewers with a width of 24" or over shall be shown as double line and include a center line for dimensioning. Existing sewers with a width of less than 24" shall be shown as single line, unless the sewer is brick or is part of a separate system. All existing brick sewers shall be shown as a double line. In a separate system where the stormwater conduit is located directly over the sanitary sewer, the sanitary sewer shall be shown as a single dashed line and the stormwater conduit shall always be shown as double line.

Additionally, this contact has changed:

- Benjamin Jewell's title has been corrected to Chief, Collector Systems.
